EC2 Node.js App Deployment – Step-by-Step

1 Launch EC2 Instance

- Open AWS → EC2 → Launch Instance
- Choose Amazon Linux 2 AMI
- Instance type: t2.micro (Free tier)
- Configure Security Group: allow **SSH (22)**, **HTTP (80)**, **Custom TCP 3000**

---

2 Connect to EC2

```
ssh -i "your-key.pem" ec2-user@<Public-IP>
```

---

3 Update & Install Node.js

```
sudo yum update -y
curl -sL https://rpm.nodesource.com/setup_18.x | sudo bash -
sudo yum install nodejs -y
node -v
npm -v
```

---

4 Setup Project Folder

```
mkdir myapp
cd myapp
npm init -y
```

---

5 Install Dependencies

```
npm install express
```

---

6 Create Public Folder & HTML

```
mkdir public
vi public/index.html
```

Add sample HTML code:

```
<!DOCTYPE html>
<html>
<head>
    <title>My Node App</title>
</head>
```

```
<body>
    <h1>Hello Sangram!</h1>
</body>
</html>
```

---

7 Create app.js

```
vi app.js
```

Add Node + Express server code:

```
const express = require("express");
const app = express();

app.use(express.static("public"));

app.listen(3000, () => {
  console.log("Server running on port 3000");
});
```

---

8 Run Server

```
node app.js
```

- Check output: `Server running on port 3000`
- Visit in browser:

```
http://<Public-IP>:3000
```
